ABOUT ME

Enthusiastic and motivated front-end developer with 3 years of hands-on Project (Experience) in creating responsive and user-friendly web applications. Proficient in HTML5, CSS3, and JavaScript (ecmascript6), with exposure to popular library like Reactjs and tailwind css. Adept at collaborating with cross-functional teams to deliver high-quality, visually appealing website. Seeking opportunities to leverage skills and drive innovation in a dynamic development environment.

EDUCATION

2023	**Front-End Development** Coursera Learning Certificate by META INC	2024 - present	**Bachelor of Computer Science** University of The People

PROJECT EXPERIENCE

2025
LITTLE LEMON RESTAURANT

Capstone

A responsive restaurant web app designed in Figma and fully developed by me using ReactJS, JavaScript, and React Router. Built specifically for dining reservations, and food purchase , the app features an interactive menu cards and a global shopping cart powered by React Context Hook for managing bookings. It supports seamless navigation, dynamic content rendering, and cart functionality. I focused on clean UI, modular components, and scalable architecture to ensure a smooth user experience. This project highlights my ability to turn design prototypes into functional, production-ready code.

Top-Notch Saloon Reservation Web App

Freelance

A sleek and responsive web application designed and developed for a barbing company in Bali, Indonesia, using ReactJS, JavaScript, React Router, react-multi-carousel, and React Hook. Tailored for salon appointment bookings, the app includes a dedicated admin dashboard for managing reservations and customer data. I integrated Supabase as a backend-as-a-service for secure data storage and retrieval, using async/await API calls for smooth, real-time interactions. The project emphasizes clean UI, modular architecture, and a seamless user experience from both client and admin perspectives.

My Portfolio webpage

Self-Pace

This is a responsive single-page application (SPA) that showcases my personal portfolio, built using ReactJS, JavaScript, CSS3 Modules, and version-controlled with Git. Designed to perform seamlessly across multiple devices, the site reflects my front-end development skills and attention to user experience. Through this project, I gained deep insights into conditional rendering, enhancing my ability to build dynamic and interactive interfaces.

BANGGAI TOUR

Freelance

- Worked with the wider designer representative.
- Manage website design, content, SEO principle, branding and logo design.

2024
Todo-list App

Self Project

TThis project is a simple yet powerful Todo List application built using ReactJS and JavaScript.
Developing this app was a pivotal moment in my journey with React—it helped me grasp the fundamentals of React Hooks, especially the useState hook. I used useState to manage the dynamic state of the task list, allowing users to add and delete in real time.
